PROJECT DOSSIER – FARMAGEND

Version for Private Investors

Executive Summary

- FARMAGEND redefines the pharmacy model through a hybrid physical-digital solution with robotic automation 24/7, e-commerce, mobile app and advanced management - based on data. The project starts from a real pharmacy with more than 20 years of activity, reducing the risk of startup.

Why now

- The pharmaceutical sector faces pressure in labor costs, changes in habits post-COVID, growing digitalization and - demand for continuous access. The Automation is no longer optional and becomes a critical competitive advantage.

Value Proposition

- 24/7 access, reduced waiting times, personalization through CRM, greater operational efficiency and replicable scalability.

Business Model

- Income from physical and online sales, premium subscriptions and agreements with laboratories. Leveraged cost structure in technology that improves margins from of year 2.

Scalability

- Model replicable through dispensers automated. Cost per new unit controlled and progressive return by economies of scale.

Financial Model – Scenarios

- Conservative scenario: growth accumulated ~70% over 5 years. Realistic scenario: ~170%. Expansive scenario: ~250%. Break-even estimated between year 2 and 3.-

Use of ENISA Funds

- Technology and automation (45%), capital circulating (25%), marketing and growth (20%), training and structure (10%).

Conclusion

- FARMAGEND does not digitize a pharmacy: redefines access to health through automation, data and proximity.
