FINAL WORK

Nutritional intervention and healthy habit change

ANALYSIS OF CLINICAL CASES: MANUEL AND CLAUDIA

Nutrition work, food education and promotion of physical activity

Document content: nutritional assessment, dietary changes, nutritional education and physical activity plan

Learn to eat better, move more and consolidate healthy habits to improve quality of life.

FINAL WORK

PATIENT 1:

Manuel is a 65-year-old man, single, retired since he was 57.
due to a myocardial infarction. The family doctor has
referred to a dietitian nutritionist for poor results
biochemical tests in the last two tests and due to his weight gain
in the last year. Always has a tendency towards obesity, measures
170 cm and his current weight is 91.7 kg.

Since the heart attack, he has been taking medication for hypercholesterolemia and
hypertension, as well as Sintrom (anticoagulant drug). In your
His last blood test had increased his blood levels.
LDL cholesterol and decreased HDL, so it was necessary
adjust the medication again.

He has never practiced physical exercise because it seems like a waste
of time. Although, forced by the situation, for a month
He is going to walk 2 km in the afternoons.

Below is what your intake for a day could be
any weekday:

Time	Location	Food/Drink
9:30		Coffee with whole milk and sugar
11:15	Bar beside his house	A slice of Spanish omelette, one small draught beer
14:15		Vegetable purée or salad or legumes with chorizo, meat (pork rib, chicken or steak beef) with peppers or other vegetables, a coffee cut with sugar, two glasses of red wine
19:30	Bar (with friends)	Two beers, nuts or crisps
21:30		Mature cheese sandwich or chorizo or ham or ham tortilla, a glass of wine

FINAL WORK

1. Review of the nutritional and biochemical situation

Manuel has grade I obesity (BMI 31.7 kg/m²), with history of myocardial infarction, poorly controlled dyslipidemia (**LDL, HDL), hypertension and anticoagulant treatment with Sintrom.**

It has a dietary pattern that is hypercaloric, rich in fat. saturated, alcohol, simple sugars and processed products, with low presence of fruit, various vegetables, fish and cereals integral.

From the biochemical and clinical point of view, their diet and Current habits favor:

- Worsening of the lipid profile.
- Increased cardiovascular risk.
- Weight increase and insulin resistance.
- Potential interferences with medication (alcohol and Syntrom).
- Risk of hidden sarcopenia due to poor protein quality and little physical activity.

The daily walk that they force him to take is a positive first step, but clearly insufficient to compensate for the rest of the style of life.

If you do not change your habits, you are at risk of a new event. cardiovascular, uncontrolled INR and progression of obesity is elevated.

2. Recommended changes in diet and routine

In Food you should:

- Clearly reduce daily Alcohol (ideally eliminate it or limit it to specific occasions).
- Reduce or preferably eliminate sausages, chorizo, cured cheese and fatty meats.
- Eliminate added Sugar (coffee, drinks).
- Get out of the habit of Fritters and skewers at bars.

FINAL WORK

It is recommended to increase consumption of:

- Vegetables and vegetables for lunch and dinner.
- Daily fruit (2 – 3 pieces).
- Fish, especially blue, 2 – 3 times/week.
- Legumes without sausages.
- Extra virgin olive oil in moderate quantity.

You should also change whole dairy products for semi-skimmed or skimmed and to adjust portions and schedules, avoiding type dinners fatty snack.

Create a Routine:

- You should maintain your daily walk and progress from 2 km at 30 – 45 min at a brisk pace, introduce strength exercises gentle 2 days/week (very important at his age).
- Reduce social time linked exclusively to alcohol (which the bar is not the only social plan).
- Sleep and eat at more regular times.

3. Example of a complete menu for one day

Meal time	Food/Drinks
Breakfast	Coffee with semi-skimmed milk, no sugar, whole wheat toast with tomato and olive oil extra virgin, a piece of fruit
Mid-morning	Low-fat natural yoghurt or a small handful unsalted nuts, water
Lunch	Lentils stewed with vegetables (no chorizo), baked fish fillet with vegetables sautéed, whole wheat bread (small amount), fruit, water (without wine)
Afternoon snack	Fruit or natural yoghurt, herbal tea or coffee without sugar
Dinner	Mixed salad with lettuce, tomato, carrot, boiled egg and olive oil, chicken breast or white fish griddle, small whole wheat bread, water

FINAL WORK

Expected result if the guideline is followed

- Gradual weight loss (0.5 kg/week).
- Improvement of LDL and increase of HDL.
- Better control of blood pressure.
- More stable INR.
- Lower risk of cardiovascular relapse.
- More energy and better quality of life.

4. Food and Sintrom: what Manuel should know

You should know that, with Sintrom, the problem is not that you have to consume vitamin K, but you have to do it more
irregular.

Key points to explain to you clearly:

You can eat green leafy vegetables (spinach, chard, broccoli),
but always in similar quantities week by week, you should avoid sudden changes in diet without notifying the doctor. alcohol as interferes with INR control, it is best avoided and should not be taken supplements or “natural” products without consulting first.

You should avoid supplements of:

- Vitamin K.
- Ginseng, ginkgo biloba, St. John's wort.

Check INR more frequently if habits change.

FINAL WORK

PATIENT 2:

Claudia is a 15-year-old teenager who comes for a consultation referred by his pediatrician due to a diagnosis of overweight and digestive discomfort (frequent constipation), in addition to difficulties concentrating and fatigue. He is 1.68 m tall and weighs 79 kg (BMI 28).

He lives with his parents, who work outside the home all day, so what you usually eat and eat pre-cooked or quick-cooked foods prepare. Your daily diet is based on foods ultra-processed foods, simple sugars and low fruit consumption, vegetables and fiber. Has not exercised physically for more than a year (she previously attended dance classes), and currently spends more than four hours a day in front of screens (computer, mobile phone, television).

He does not have any additional clinical diagnosis and does not take medication. currently, but his pediatrician believes that his diet and lifestyle life should be modified as soon as possible to avoid the development of associated diseases.

Below, what could be an example of a typical day of feeding:

Time	Food/Drink	Location
7:30	Packaged juice	At home
7:30	A pastry industrial	at the institute
11:00	Snack such as biscuits or chocolate bar	at the institute
14:30	Pasta with sauce of fried tomato	
14:30	Burger or sausages	
14:30	Sugary soft drink	
17:00	White sliced bread with cocoa cream	
17:00	Chocolate milkshake	
21:30	Ready-made pizza or nuggets or sandwich with French fries	
21:30	Soft drink	

FINAL WORK

As you did with Manuel, give a brief review of the condition Claudia's nutritional status and the risks associated with her diet current.

Then, answer these questions:

- What changes should you make in your diet and style? of life to improve your health?
- Could you propose an example of a daily menu adapted to their needs?
- What nutritional education strategies could be applied in your case or family environment?

LIFESTYLE CHANGE TO IMPROVE HEALTH

Changes you should introduce into your diet:

Claudia needs to re-educate her eating pattern, “not to get **diet”**

Priority changes:

- Do not skip breakfast, replacing pastries and juices with real foods.
- Reduce ultra-processed foods (pizza, nuggets, pastries, soft drinks) to occasional consumption.
- Eliminate sugary drinks and prioritize water.
- Increase fiber consumption:
    - Fruits (2 – 3 pieces/day).
    - Vegetables at lunch and dinner.
    - Legumes and whole grains.
- Replace refined flours with whole grains.
- Introduce quality proteins: Fish, eggs, legumes, lean meats.
- Establish regular meal times.
- Improve the quality of snacks to avoid peaks in hunger and fatigue.

FINAL WORK

These changes will help Claudia:

- Improve constipation.
- Increase satiety.
- Improve energy and concentration.
- Promote weight normalization.

Example of a daily menu adapted to your needs

Lunch	Options recommended	Side dishes	Drink
Breakfast	Semi-skimmed milk or natural yogurt, toast whole wheat with olive oil and tomato or turkey	piece of fruit	
Medium tomorrow (institute)	Small whole grain sandwich of fresh cheese or turkey, natural yogurt with fruit		
Lunch	First course: lentils with vegetables or assorted salad; Second course: chicken grilled, baked fish or french omelette	Vegetable garnish cooked or sautéed, bread moderate integral, fruit	water
Afternoon snack	Wholemeal bread with hummus or avocado, natural yogurt with fruit		
Dinner	Vegetable soup or sautéed vegetables, fish, egg or breast chicken	Small wholemeal bread roll	water

The occasional consumption of soft drinks, pastries and sweets, these should be reserved for special occasions, avoiding its daily consumption to maintain a healthy diet balanced and healthy.

FINAL WORK

Nutritional education strategies in the case of Claudia and her family environment

We should explain to Claudia, using simple language and directly, the importance of fiber consumption in the prevention and treatment of constipation. Furthermore, it must highlight how a balanced diet positively influences in your daily energy and in your ability to concentrate to key aspects for their academic performance and general well-being.

It is important to avoid messages that may result from guilt, trying at all times to transmit information in a manner constructive and motivating. To facilitate the change of habits, it is I recommend setting small, easy goals. achievable, allowing Claudia to experience progress without feel overwhelmed. Likewise, their autonomy must be encouraged progressive in the kitchen, encouraging her to participate in the preparation of their own food.

At the family level

Parental involvement in weekly menu planning It is essential. It is advisable that there is always food at home visible and accessible healthy foods, thus facilitating positive choices in the day to day. It is also helpful to prepare simple meals with in advance, to guarantee healthy options and avoid resorting to less advisable alternatives in times of hurry.

Key message: Teach Claudia to do a basic reading of Product labels can help you make decisions informed. Also, provide you with snack ideas healthy and quick will make it easier for you to maintain a healthy diet. balanced even during busiest times. It is It is essential to associate healthy eating with well-being and self-care, avoiding it being perceived as a restriction or prohibition.

FINAL WORK

Final key message

“It's not about dieting, but about learning to eat better.”
now to avoid problems in the future.”

PHYSICAL ACTIVITY PLAN

Phase 1 · Activation: Progressive pattern of physical activity to **teenagers**

Target

The main objective of this phase is to get out of a sedentary lifestyle without generate rejection towards exercise. It is intended that the movement become part of everyday life, prioritizing the creation of the habit and the enjoyment.
