Executive Summary FARMAGEND redefines the pharmacy model through a hybrid physical and digital solution with 24/7 robotic automation, e-commerce, a mobile app and advanced data-driven management. The project builds on an existing pharmacy with more than 20 years of operation, reducing start-up risk.

Why Now The pharmaceutical sector faces pressure from labour costs, changes in post-COVID habits, increasing digitalisation and demand for continuous access. Automation is becoming a critical competitive advantage.

Value Proposition 24/7 access, shorter waiting times, personalisation through CRM, greater operating efficiency and a scalable, replicable model.

Business Model Revenue from physical and online sales, premium subscriptions and agreements with laboratories. A technology-based cost structure improves margins from year 2.

Scalability A model that can be replicated through automated dispensers. Controlled cost per new unit and progressively improving returns through economies of scale.

Financial Model · Scenarios Conservative scenario: approximately 70% cumulative growth over 5 years. Realistic scenario: approximately 170%. Expansion scenario: approximately 250%. Estimated break-even between years 2 and 3.

Use of ENISA Funds Technology and automation (45%), working capital (25%), marketing and growth (20%), training and organisational structure (10%).

Conclusion FARMAGEND redefines access to healthcare through automation, data and proximity.
